10/667,542 – Proosed Amendments for Discussion Purposes Only

1. (Previously Presented) An executable code check computing system comprising:
 - an input component operating on computer hardware that receives an executable object file having an embedded specification, the specification specified at a source code level by embedding the specification within source code of the executable object; and
 - a checker operating on computer hardware that employs the specification to facilitate static checking of the executable object file, the checker providing information if a fault condition is determined, the fault condition is based on one or more of a violation of rules for using an interface, system resource management rules, rules for proper ordering of method calls, or string parameter format rules.
